

REDLUFFY

AIM - To interpret marvel's values in a Fictional motorcycle for Wade Wilson (a.k.a. *DEADPOOL*)

BRIEF - A motorcycle designed to meet the unique and creative characteristics of the iconic marvel superhero Deadpool, using state-of-the-art technology to provide the vehicle an incredibly high-performance, reconstructive materials, etc.

Wade Wilson is one of the universe's most relentlessly funny heroes thanks to his healing factor and big mouth. Wade Wilson was born in Canada yet grew up to be the least Canadian person in history. With enormous power comes no responsibility, at least not in the case of the Merc with a Mouth. He's known as the 'Regenerating' Degenerate for a reason: he's a regenerative degenerate. Deadpool has a healing factor that enables him to recover from severe injuries and regenerate body parts!

CHARACTERISTICS -

Gender - Male (a real sexy one)

Height - 6' 2" (I'm a hunk, ladies! Over 6ft is what ya want, right?)

Weight - 210 lbs (am I getting fat?)

Eyes - Blue

Hair - Bald (formerly blond) (why am I bald)

Unusual Features - Heavily scarred skin (this needs to be normalized, pronto!)

The main thought behind designing a bike for deadpool was to make him appear more cooler(p.s.- Though it appears hilarious, a hero like him deserves much more than a vespa to strike down his rivals.)

MOOD BOARD –

KEYWORDS - **FUNKY, HYSTERICAL, DYNAMIC**

MATERIAL BOARD -

Self-healing fiber-reinforced polymer

Carbon Fiber

Aluminium

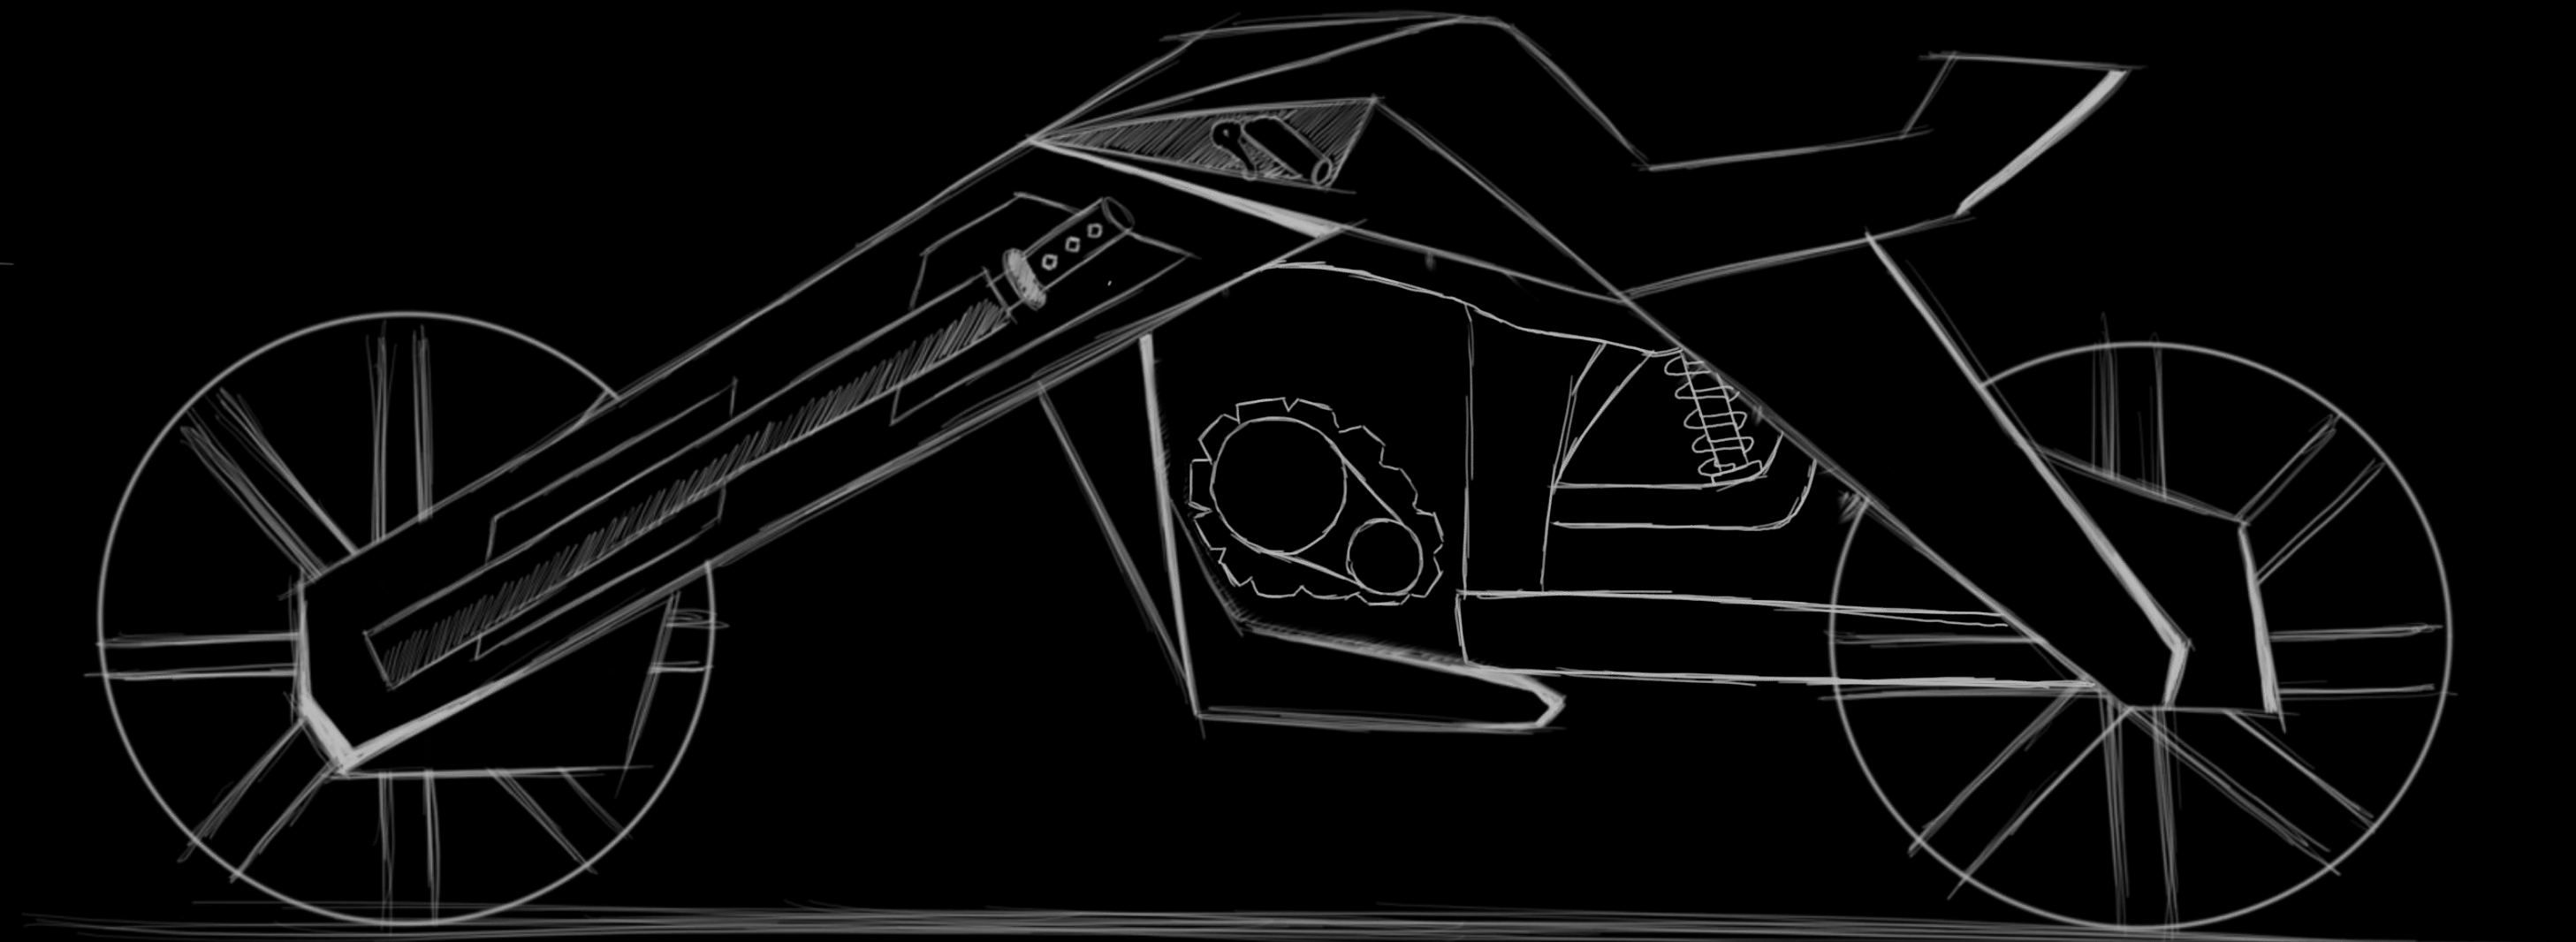

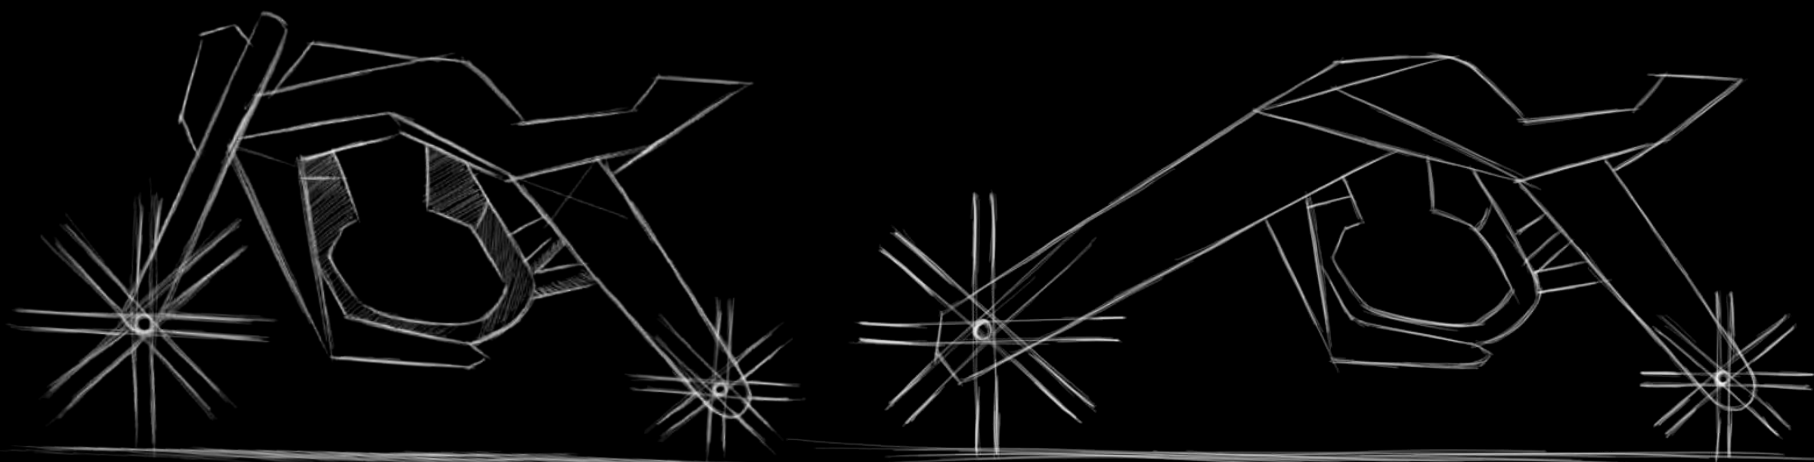

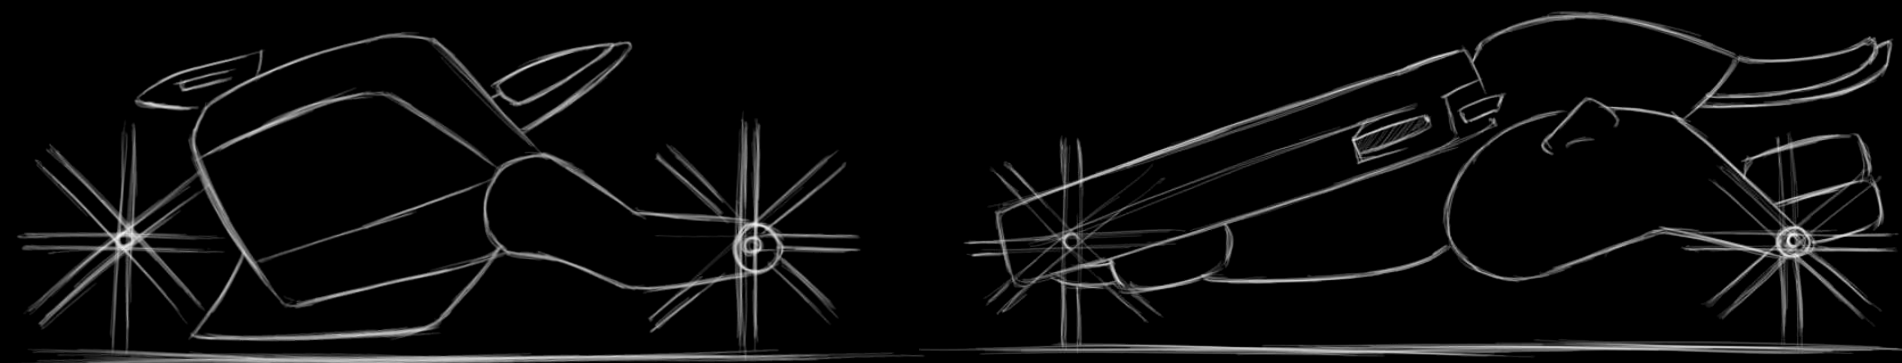

Leather

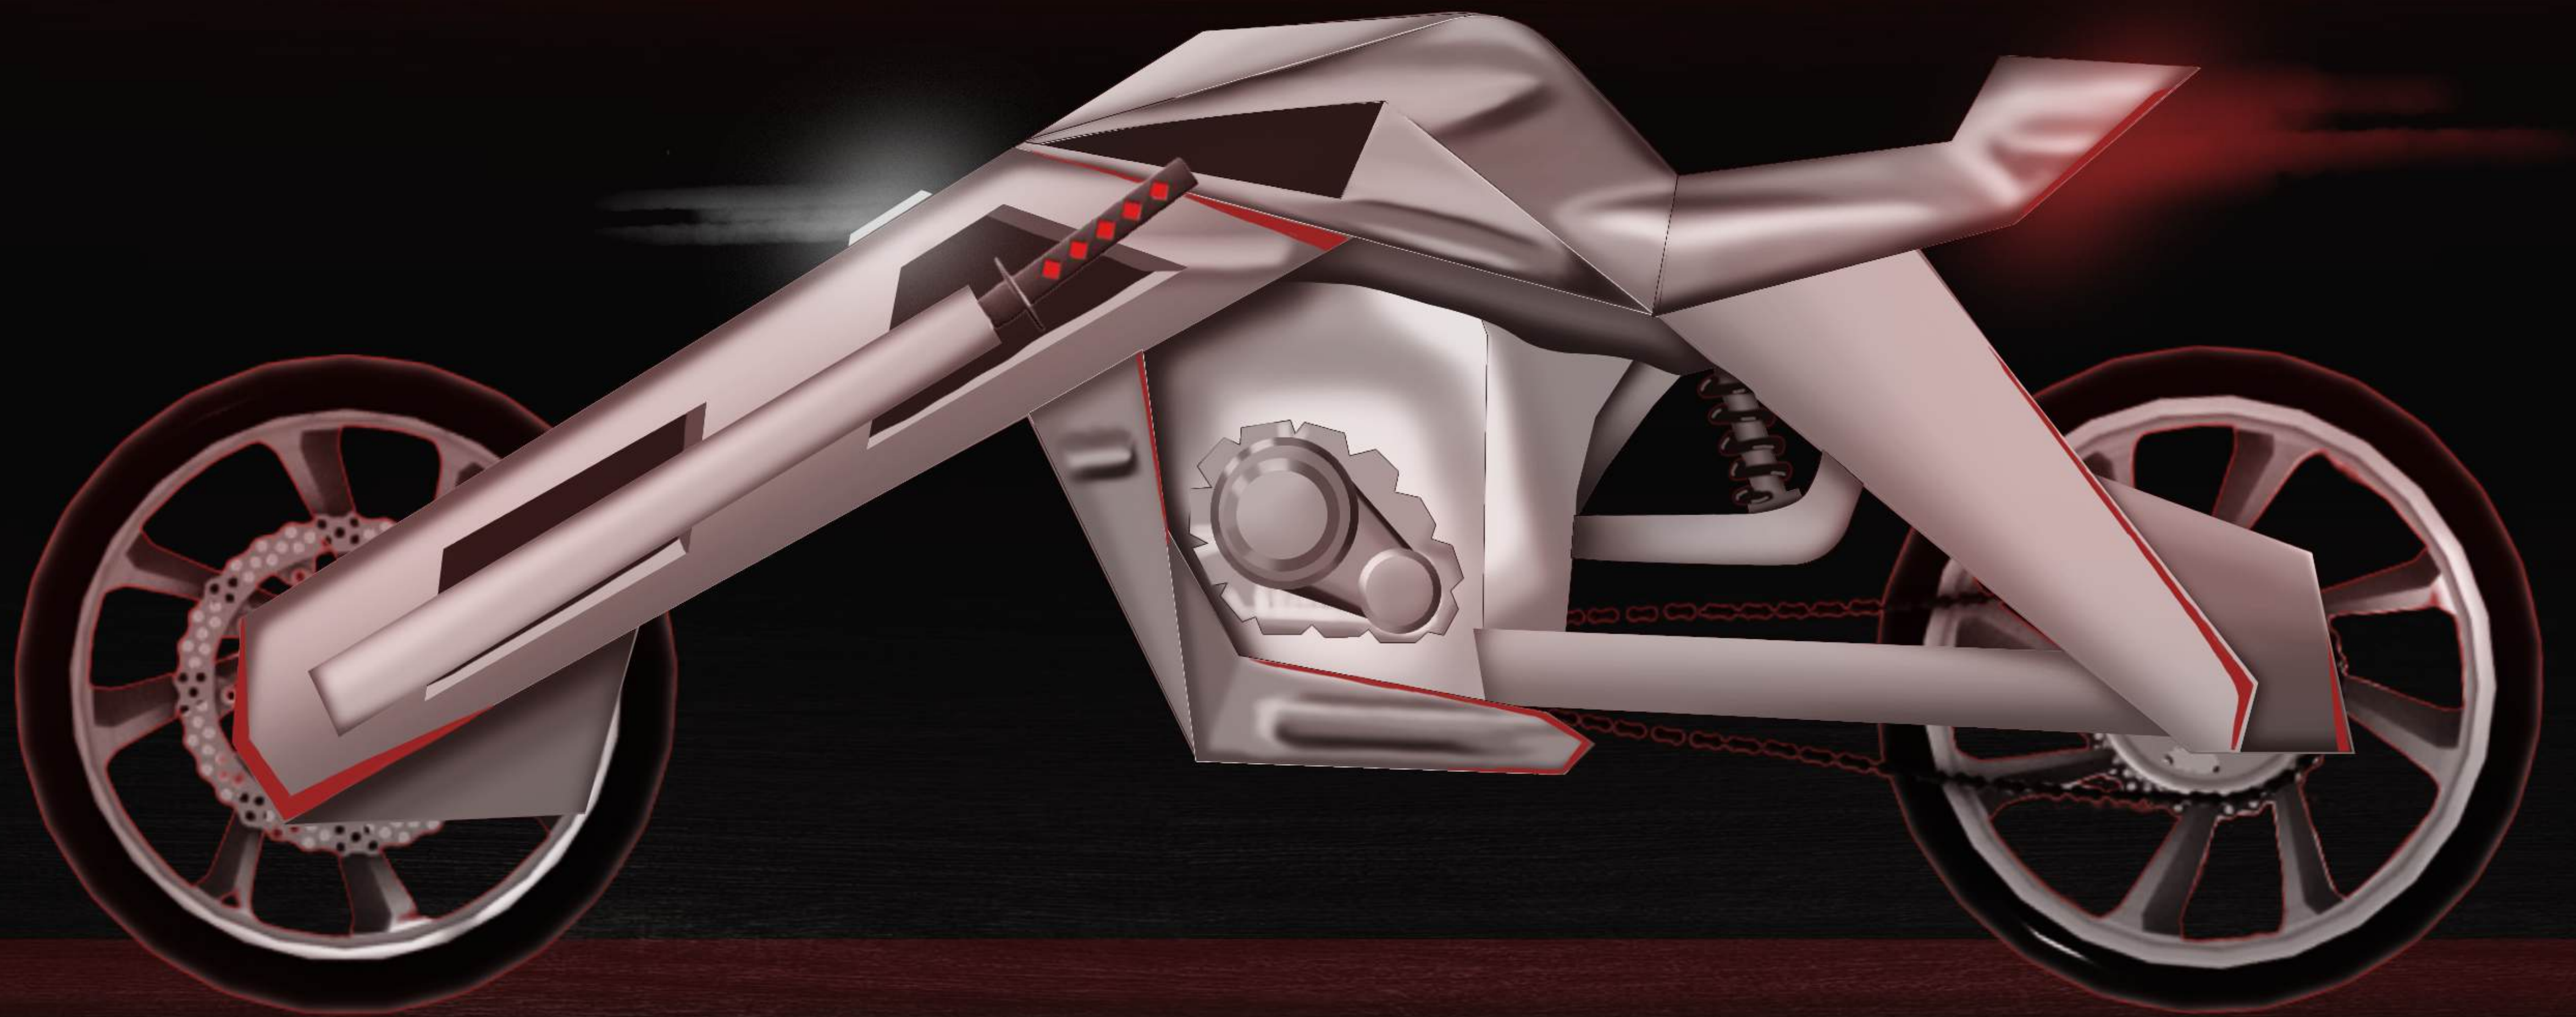

Capable of autonomous/spontaneous or stimulated repair of their damage under external stimuli

Self-healing materials have the ability to repair damage that may have occurred during a flight and increase the lifetime of the components. One key advantage of self-healing composite materials is to repair dynamic damage and maintain impact resistance.

IDEATION -

FEATURES -

A compartment for his Katanas

A compartment for his beloved guns

Tail light inspired by his funny eyes

Button in his belt to regenerate the bike

A motorbike having "riding assistance" features that help it maintain its upright position.

Jets for boosting the speed and hover when necessary
